Dieser Motorkatalog gilt nur in Verbindung mit dem aktuellen Baureihenheft für die Amarex KRT.

Achtung! Die Motordaten sind werkstoffabhängig!

This motor catalogue is only valid in conjunction with the current type series booklet for Amarex KRT.

Attention! Motor data depends on material versions!

Ce catalogue moteur n'est valable qu'avec le cahier de série de construction actuel relatif à l' Amarex KRT.

Attention! Données de moteur en fonction des matériaux!

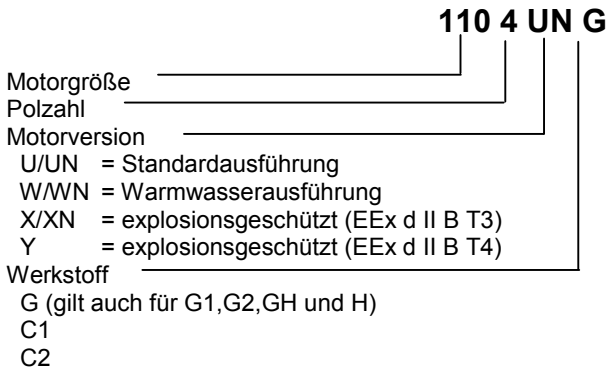

Este catálogo de motores solo es válido en relación con el actual Cuaderno de la Serie de Agitadores Amarex KRT.

¡ Atención ¡ Los datos de los motores dependen de la versión de materiales

Alle Motoren der Tauchmotorpumpen Amarex KRT sind Drehstrommotoren mit Kurzschlußläufer.

Typbezeichnung:

Bitte beachten Sie, daß die Motordaten vom Material des Motorgehäuses abhängig sind. Die Motordaten sind deshalb nach Werkstoffvarianten geordnet.

Spannung und Frequenz

Standard-Bemessungsspannung: 400/690 V Δ/Y, 50 Hz
 Motoren 012/022/014/024/034 400V Y, 50 Hz

Die Daten in den Tabellen gelten für den Betrieb an 400V - 50Hz. Bei Betrieb an 690V - 50Hz sind die Werte für den Strom entsprechend umzurechnen .

Andere Bemessungsspannungen sind auf Anfrage lieferbar.

Maximale Toleranzen für Schwankungen des Netzes entsprechen dem Bereich A nach DIN EN 60 034-1:
 Netzspannung ± 5 %, Netzfrequenz ± 2 %
 (Netzspannung auch ± 10% für Version U und W)

Einschaltart: Direkt

Eine Stern-Dreieck-Einschaltung ist möglich, außer bei den Motoren 002/012/022/014/024/034.

Schalzhäufigkeit:

Motorleistungen bis 7,5 kW: max. 30 Schaltungen/h
 Motorleistungen über 7,5 kW: max. 10 Schaltungen/h
Maximal 5000 Schaltungen/a

Betriebsart und Temperaturen:

Die Motoren Amarex KRT sind für Dauerbetrieb S1 bei den angegebenen maximalen Fördermitteltemperaturen ausgelegt.
 Das Isoliersystem entspricht der Wärmeklasse F.
 Die Anschlußleitungen sind für eine maximale Lufttemperatur von 40°C dimensioniert.

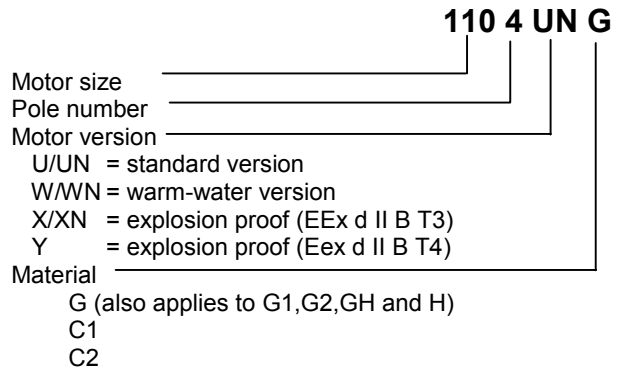

Frequenzumrichterbetrieb:

Die Motoren Amarex KRT sind prinzipiell für Frequenzumrichterbetrieb geeignet.
 Für explosionsgeschützte Motoren sind beim Betrieb am Frequenzumrichter besondere Bedingungen zu beachten.

Hinweise zur Elektroinstallation finden Sie in der zugehörigen Betriebsanleitung der Tauchmotorpumpe.

All Amarex KRT submersible pumps are three-phase squirrel-cage motors.

Type designation:

Please note that motor data depend on the motor housing material. For this reason, they were classified according to material variants.

Voltage and frequency:

Standard voltage rating: 400/690 V Δ/Y, 50 Hz
 Motors 012/022/014/024/034 400V Y, 50 Hz

Table data apply to an operation at 400V - 50 Hz. The values of the current need to be converted accordingly if operation is to take place at 690V - 50 Hz.

Further voltage ratings will be possible on request.

Maximum allowances for mains fluctuations are according to range A of DIN EN 60 034-1:
 supply voltage ± 5 %, supply frequency ± 2 %
 (supply voltage also ± 10% for versions U and W)

Starting mode: direct

Star-delta mode is possible, except for motors 002/012/022/014/024/034.

Switching frequency:

motor ratings to 7,5 kW: max. 30/hr
 motor ratings above 7,5 kW: max. 10/hr
5,000 switching operations per year at maximum.

Mode of operation and temperatures:

Amarex KRT motors are designed for continuous operation S1 with a maximum fluid temperature stated. Insulation system corresponds to insulation class F. Connecting cables are rated for a maximum air temperature of 40°C.

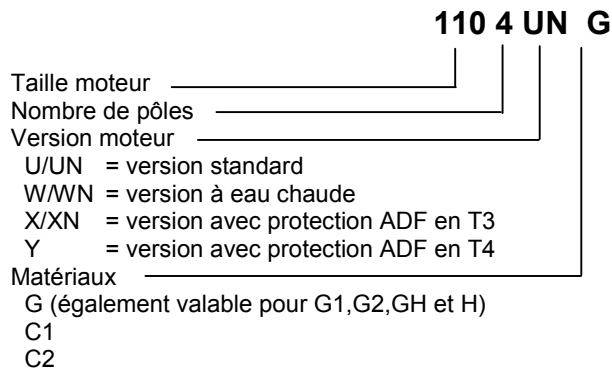

Operation with variable frequency drive (VFD):

Amarex KRT motors are basically appropriate for an operation with VFD.
 As for explosion proof motors, pay attention to the special requirement with regard to a VFD operation.

Instructions for electrical installation are to be taken from the operating manual of this submersible pump.

Tous les moteurs des pompes submersibles Amarex KRT sont des moteurs triphasés à induit en court-circuit.

Code de désignation:

N.B.: Les données moteur sont fonction du matériau de la carcasse moteur. Elles ont donc été classifiées selon les variantes de matériaux.

Tension et fréquence:

| | |
|-----------------------------|---------------------|
| Tension standard de calcul: | 400/690V Δ/Y, 50 Hz |
| Moteurs 012/022/014/024/034 | 400V Y, 50 Hz |

Les données des tableaux s'appliquent au service avec 400V, 50 Hz. Quant au service avec 690V 50Hz, il faut convertir les valeurs de courant analogiquement.

Des tensions de calcul ultérieures sont disponibles sur demande.

Tolérances maximales relatives aux variations du secteur conformément au secteur A de la norme DIN EN 60 034-1: tension du secteur ± 5%, fréquence du secteur ± 2%. (tension du secteur ± 10% pour les versions U et W)

Mode de démarrage: direct

Le démarrage étoile-triangle est possible, à l'exception des moteurs 002/012/022/014/024/034.

Fréquence de démarrage:

| | |
|------------------------------------|-----------|
| Puissances moteur jusqu'à 7,5kW: | max. 30/h |
| Puissance moteur de plus de 7,5kW: | max. 10/h |

5000 démarrages par an au maximum

Type et service et températures:

Les moteurs Amarex KRT ont été dimensionnés pour un service continu S1 avec moteur avec les températures maximales indiquées. Le système d'isolement est conforme à la classe thermique F. Les câbles de raccord sont dimensionnés à une température extérieure maximale de 40°C.

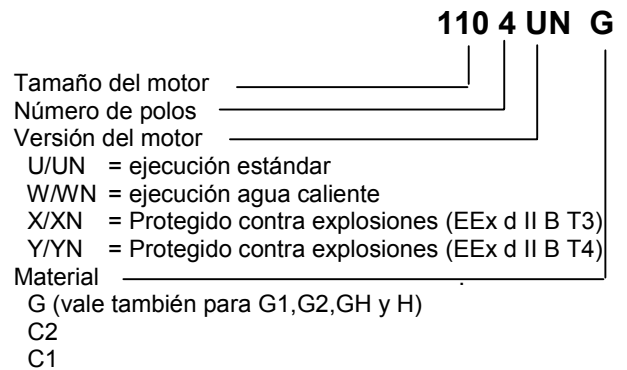

Service à variateur de fréquences:

En général, les moteurs Amarex KRT sont appropriés au service avec variateur de fréquences. Faire attention aux conditions spéciales requises par les moteurs avec variateur de fréquences.

Les instructions relatives à l'installation électrique se trouvent dans la notice de service de la pompe submersible.

Todos los motores de Amarex KRT son trifásicos con rotor de jaula.

Denominación:

Rogamos tengan Uds. en cuenta que los datos del motor dependen del material de su carcasa. Por esta razón, los datos del motor están clasificados según las variantes de materiales.

Voltaje y frecuencia:

| | |
|-----------------------------|----------------------|
| Voltaje estándar: | 400/690 V Δ/Y, 50 Hz |
| Motores 012/022/014/024/034 | 400V Y, 50 Hz |

Los datos de las tablas corresponden a servicio de 400V, 50 Hz. Para servicio de 690V 50 Hz, los valores de la corriente se han de convertir del modo correspondiente.

Bajo consulta, se puede suministrar para otros voltajes.

Oscilación máxima permisible de la red en el rango A según DIN EN 60 034-1:

Voltaje de red ± 5 %, Frecuencia de red ± 2 %
(Voltaje de red, también ± 10% en versiones U y W)

Arranque: Directo

El arranque estrella-triángulo es posible, excepto en motores 002/012/022/014/024/034

Frecuencia de arranques:

| | |
|--------------------------|---------------------|
| Motores de hasta 7,5 kW: | máx. 30 arranques/h |
| Motores de más de 7,5kW: | máx. 10 arranques/h |

Máximo 5000 arranques/año

Clases de servicio y temperatura:

Los motores Amarex KRT están diseñados para servicio continuo S1 con las temperaturas máximas del medio bombeado indicado.

Su sistema de aislamiento corresponde al de Clase F. Su cable eléctrico está dimensionado para una temperatura ambiente máxima de 40 °C.

Servicio con Variador de Frecuencia:

Los motores Amarex KRT, en principio son apropiados para servicio con variador de frecuencia. Los motores protegidos contra explosiones en servicio con variador de frecuencia han de observar especiales condiciones.

Véanse las indicaciones para la instalación eléctrica en el manual de instrucciones de la motobomba sumergible correspondiente.

Kurzbeschreibung

OZOFLEX (PLUS) Gummischlauchleitungen S1BN8-F wurden für KSB Standard Pumpen sowie für explosionsgeschützte Pumpen entwickelt. Sie sind bestimmt für den beweglichen Anschluss von KSB-Tauchmotorpumpen bis zu einem Leitungsquerschnitt von 35 mm².

Wegen der unterschiedlichen und auch häufig wechselnden Zusammensetzung des Schmutzwassers dürfen die Leitungen nur in leicht zugänglichen und kontrollierbaren Bereichen eingesetzt werden.

Bei aggressivem Wasser oder Wasser mit besonderer Zusammensetzung ist die Beständigkeit der Leitung im Einzelfall zu überprüfen.

Sie sind verwendbar in Innenräumen, im Freien, in explosionsgefährdeten Bereichen, in feuergefährdeten Betriebsstätten, in der Industrie, in gewerblichen und landwirtschaftlichen Betrieben.

Darüber hinaus gelten die allgemeinen Festlegungen in DIN VDE 0298-300.

Aufbau in Anlehnung nach DIN VDE 0828-16

VDE-REG.NR. 7586

Short description

OZOFLEX(PLUS) rubber-sheathed cables S1BN8-F are designed to be used for KSB standard pumps, as well as for explosion proof versions. They are intended for the mobile connection of KSB submersible motor pumps up to a cross section of 35 mm².

Due to the many different and variable compositions of waste water, the cables must be installed in easily accessible places where they can be inspected without difficulty.

When aggressive water or water of certain other compositions is involved, the chemical resistance of the cable must be checked in each individual case.

These cables can be used indoors, outdoors, in explosive atmospheres, in locations exposed to fire hazards, in industrial and agricultural plants.

In addition, the general regulations of DIN VDE 0298-300 (HD 516) apply.

Structure based on DIN VDE 0828-16

VDE-REG.NR. 7586

Description Courte

Les câbles OZOFLEX (PLUS) avec gaine en caoutchouc S1BN8-F ont été développés pour des pompes standard KSB ainsi que pour des pompes avec protection ADF. Ils sont prévus pour le raccord mobile de pompes à moteur submersible KSB jusqu'à une section de câble de 35 mm².

Dû à la composition différente et souvent variable des eaux résiduaires, il faut installer les câbles aux endroits d'accès facile pour contrôle.

Si les eaux sont agressives ou de composition spéciale, il faut vérifier la stabilité du câble dans chaque cas individuel.

Ces câbles peuvent être utilisés à l'intérieur, à l'extérieur, dans les milieux explosifs, dans les ateliers d'usine de risque d'incendie, dans l'industrie et dans l'exploitation industrielle et agricole.

En outre, DIN VDE 0298-300 (HD 516) est en vigueur.

Spécification standard selon DIN VDE 0828-16

VDE-REG.NR. 7586

Breve descripción

El cable con manguera de goma OZOFLEX (PLUS) S1BN8-F fue diseñado tanto para las bombas KSB estándar como para las protegidas contra explosiones. Ha sido previsto para las conexiones movibles de las motobombas sumergibles KSB hasta una sección de 35 mm².

Debido a las diferentes y, con frecuencia, variables composiciones de las aguas residuales, el cable se ha de disponer en lugares fácilmente accesibles y controlables.

Con aguas agresivas o de especial composición, se ha de examinar la estabilidad del cable en cada caso.

Estos cables se pueden emplear en el interior, intemperie, en zonas de riesgo de explosión, áreas con peligro de incendio, en la industria y en servicios agrícolas e industriales.

Por lo demás, rigen las disposiciones generales DIN VDE 0298-300.

Estructura conforme a DIN VDE 0828-16

Kurzbeschreibung

Die TEHESITE-Schlauchleitungen (TEFZEL) sind hitzebeständige und chemisch beständige Leitungen. Sie sind bestimmt für den beweglichen Anschluss von KSB-Tauchmotorpumpen, wenn die Fördermittel- und/oder Umgebungstemperatur 60°C übersteigt bzw. wenn eine hohe chemische Beständigkeit gefordert wird.

Der Verwendungsbereich ist in einem VDE-Gutachten vom 30.11.1993 mit einem im Nachtrag vom 14.10.87 festgelegt.

Bedingt durch den Aufbau und die verwendeten Materialien hat die TEHESITE-Leitung eine geringere Flexibilität als Gummischlauchleitung

Darüberhinaus gelten die allgemeinen Festlegungen in DIN VDE 0298-300.

Aufbau in Anlehnung nach DIN VDE 0828-16

Short description

The TEHESITE cables (TEFZEL) are resistant against heat and chemicals. They are designed for the mobile connection of KSB submersible motor pumps for ambient temperatures higher than 60°C and/or where high chemical resistance is required.

The applications are stipulated in the VDE report of 30/11/1993 and its supplement of 14/10/1987.

Due to the structure and the used materials TEHESITE cables are less flexible than rubber cables.

In addition, the general regulations of DIN VDE 0298-300 (HD 516) apply

Structure based on DIN VDE 0828-16

Description Courte

Les câbles avec gaine TEHESITE (TEFZEL) sont des câbles résistant aux températures élevées et chimiquement stables. Ils sont appropriés pour le raccord mobile de pompes à moteur submersible KSB pour des températures du produit pompé et/ou des températures ambiantes supérieures à 60°C et si une stabilité chimique élevée est exigée.

Le domaine d'application a été fixé dans une expertise VDE du 30.11.1993 avec supplément du 14.10.87.

Dû à la structure et les matériaux utilisés le Câble TEHESITE est moins flexible que le câble avec gaine en caoutchouc.

En outre, DIN VDE 0298-300 (HD 516) est en vigueur.

Spécifications standard selon VDE DIN 0828-16

Breve descripción

El cable con manguera TEHESITE (TEFZEL) es térmica y químicamente resistente. Es apropiado para las conexiones movibles de las motobombas sumergibles KSB, para temperaturas del medio bombeado y/o del entorno superiores a los 60 °C, así como donde se exija una elevada resistencia química.

Su campo de aplicación quedó establecido en un Dictamen de VDE del 30.11.1993, con un suplemento al de 14.10.1987.

Condicionado por su estructura y los materiales empleados, el Cable TEHESITE tiene una flexibilidad menor que el cable con manguera de goma.

Por lo demás, rigen las disposiciones generales DIN VDE 0298-300.

Estructura conforme a DIN VDE 0828-16
